

Military Wellness Centers

BioMeasure Machines are self-service devices that accurately measure weight and height, body fat percentage and calculate body mass index (BMI) at the push of a button, then provide results on a printed ticket to each user in less than one minute.

Instant, Non-Invasive PHA Screening Tools That Will Inform and Educate Service Members with Baseline Information While Tracking Health Improvement

BioMeasure Machines Will:

Measure:

- Height, weight, body fat percentage and calculate BMI in seconds with the latest technology
- Baseline information allowing Service Members to monitor their progress
- Program effectiveness by accurately tracking health outcome improvement

Track:

- Health activity and promote positive trends
- Aggregate age and gender specific data collection results for comparisons
- Personalized results with date stamped print-out for future reference

Identify:

- Unhealthy trends and suggest recommended guidelines based on age and gender
- Potential health risks and the need for improvement

Provide:

- Instant, self-service, Periodic Health Assessments (PHA)
- A quick and easy way to encourage Service Members to proactively monitor improvement
- Brand advertisers a unique opportunity to reach a highly targeted market

Promote Positive Change:

- Creating a Culture of Wellness
- New Standard for evaluating Program effectiveness
- Inspiring, identifying and integrating active solutions
- Encouraging healthy lifestyles for soldiers, family members, retirees and civilians
- Increasing readiness, resiliency, retention and recruitment through an identified culture of health
